Setting of driving current	To change the RUN current, connect the CP+ to the (+) terminal of the voltmeter and the CP- to the (-) terminal of the voltmeter then adjust RUN CURRENT volume. $\text{Setting current (A)} = \frac{\text{CP voltage (V)}}{4}$ Setting example) When drive current is set to 0.35A/phase, the CP voltage is adjusted to 1.4V. Note) Run current should be changed during the operating of motor.																		
Setting of Stop current	In order to reduce the heat adjusting the current, change it using STOP CURRENT volume. The setting value of STOP CURRENT volume is a percentage of the setting volume of RUN CURRENT. Ex) After setting 1.4A for Run current then put STOP CURRENT volume at 50%, the stop current will be 0.7A.
