

Q&A

Question: What kind of label or marking on Ball Screws?

Ball Screws produced by KSS have a serial number which is marked on the Nut (refer to the Photo below). Record of inspection and production trail are stored in KSS for each Ball Screw with its serial number. Please note that this serial number is unique and difference from its Model number.

All of Ball Screws are vacuum packed and label with its model number on it will be pasted outside packing.

In addition, the same label will be pasted on the shipping box. You can distinguish the contents without opening the box.

To distinguish the Ball Screw, part number & serial number are marked on packaging!!
